Computer only understands the low level language(0's and 1's) but humans give information in High level language to translates it into low level language we use compiler and interpreter

Compiler	Interpreter

1) Converts the whole high level language program into machine
    program into machine language at a time.
	1) Converts the whole high level language
	
	   language line by line.

2) Execution is so fast.	2)Execution is slow.
3) compilation is slow.	3)translation is fast (line by line)
4) Errors will be displayed at the end of the each line program.	4) Errors will we displayed after execution of
5) It creates the intermediate file i.e execut- able file.	5) It doesn't create any intermediate file.
